## Introduction to Wear-Resistant Ceramic Pipe

### Product Overview

Kingway Science & Technology Co., Ltd. was established in 1998, specializing in the research and development production of ceramic valves, ceramic wear-resistant pipes, have been widely used in China domestic and abroad.

KOWOV ceramic wear-resistant pipelines are composed of structural ceramic pipes and seamless steel pipes. The ceramic pipes are firmly bonded to the seamless steel pipes using a heat distribution process or a specialized adhesive for structural ceramics.

KOWOV ceramic wear-resistant pipelines are molded as a single unit, providing high strength and toughness. They offer high-temperature resistance and aging resistance, ensuring long-term operation under conditions ranging from **-50°C to 500°C**.

### Performance Features

- 1. Low flowing Resistance**
  - The smooth ceramic surface reduces flow resistance, improving efficiency
- 2. Superior Wear Resistance**
  - Structural ceramics have 266 times the wear resistance of manganese steel and 171.5 times that of high-chromium cast iron.
  - Ceramic-lined elbows significantly reduce equipment wear in powder processing systems.
  - Based on field experience, the service life is at least 10 years, reducing maintenance frequency and costs.
- 3. Extended Service Life**
  - The steel-ceramic layer consists of high-performance structural ceramics with neutral properties.
  - Highly resistant to acids, alkalis, and seawater corrosion, with anti-scaling properties, ensuring a longer service life.
- 4. Excellent Temperature Resistance**
  - The structural ceramic has a stable crystalline structure, allowing composite pipes to operate continuously between -50°C to 500°C.
  - The thermal expansion coefficient of  $6-8 \times 10^{-6} / ^\circ\text{C}$  is about half that of steel pipes, providing excellent thermal stability.

### Application

- 1. Power Plants** – Limestone slurry transportation
- 2. Steel Mills** – Coal powder and fly ash transportation
- 3. Mining Industry** – Slurry and tailings transportation
- 4. Silicon Chemical Industry** – Silicon powder transportation
- 5. Chemical Plants** – Acid and alkali slurry transportation
- 6. Coal Chemical Industry** – Ash water, black water, coal slag, and dry coal powder transportation
- 7. Fertilizer Industry** – Granular fertilizer and crystal transportation
- 8. Coal Washing Plants** – Coal slurry and coal sludge transportation
- 9. Metallurgical Industry** – Slag discharge and boiler ash removal
- 10. New Energy** – Lithium carbonate and lithium iron phosphate transportation
- 11. Environmental Protection** – Wastewater discharge and solid waste treatment

## KOUOV<sup>®</sup> Ceramic Pipe Model Compilation Method

### KWCP-WZ-WT -DN\* L - S - PN

① ②③ ④ ⑤ ⑥ ⑦

- ① KWCP-Ceramic Pipe
- ② W -Carbon steel ; P - 3 04 Stainless Steel ; R - 3 1 6 Stainless Steel
- ③ Z- Zirconia Ceramic; A- Alumina Ceramic; C -Silicon Carbide Ceramic; N- Silicon Nitride Ceramic
- ④ ZG- Straight Pipe; WT- Elbow; ET- Equal Tee; RT-Reducing Tee; EC -Equal Cross ; RC -Reducing Cross ; CR-Concentric Reducer; ER-Eccentric Reducer; Sp1-Special Pipe Fittings
- ⑤ DN -Nominal diameter; L-Length or angle;
- ⑥ Flange Execution Standard
- ⑦ PN -Pressure Rating

Note: The special pipe fittings are non-standard diameter, and the shape can be designed according to the requirements.  
Example 1:

A 90° elbow with silicon carbide ceramic lining, carbon steel outer shell, DN80, and PN16, using HG/T 20592-2009 flange standard: DN80 PN16, using Flange HG/T20952-2009 standard:

KWCP-W-C-WT-DN80\*90°-HG/T20592-16

Example 2:

A 200mm-long straight pipe with zirconia ceramic lining, 304 stainless steel outer shell, DN80, and Class 150, using HG/T 20592-2009 flange standard:

KWCP-P-Z-ZF-DN80\*200-HG/T20592-150

## KOUOV<sup>®</sup> Model & Dimensions of Lined Ceramic Pipes

The structural form & main size of Ceramic Composite Lined Steel Pipe mm

Diagram	DN	Common steel Pipe wall thickness	Liner wall thickness	Gap between Ceramic Layer and outer metal pipe	Optional length L
	25	3 ~ 5	Refer to the Ceramic inner liner thickness table	Refer to the Ceramic layer and outer metal pipe gap table	200 ~ 500
	32	3 ~ 5			200 ~ 500
	40	3 ~ 5			200 ~ 500
	50	3 ~ 5			200 ~ 500
	65	3 ~ 5			200 ~ 500
	80	4 ~ 6			200 ~ 500
	100	4 ~ 6			200 ~ 500
	125	4 ~ 6			200 ~ 500
	150	4 ~ 6			200 ~ 500
	200	5 ~ 8			200 ~ 500
	250	5 ~ 8			200 ~ 500
	300	6 ~ 10			200 ~ 500

The wall thickness T of commonly used carbon steel pipes in this table has a pressure rating of  $\leq 5.0\text{Mpa}$ , while the outer diameter D and wall thickness T of other pressure ratings are determined through negotiation between the purchaser and the manufacturer
